The regulators of the **GRW / GRK** series are available with a non-isolated, regulated and short circuit protected main output as well as a single output or bipolar auxiliary output, which is also regulated and short circuit proof.

For the bi-/tripolar isolated auxiliary outputs, no basic-load at the main output is necessary. The kind of mounting results high mechanically reliability.

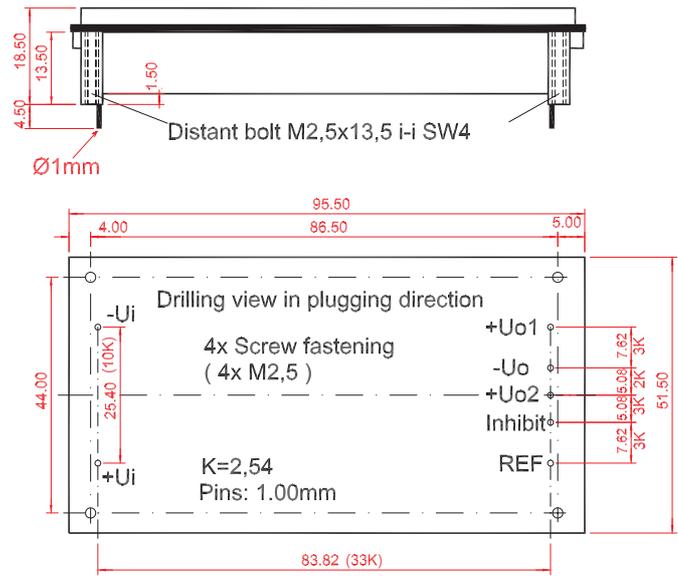

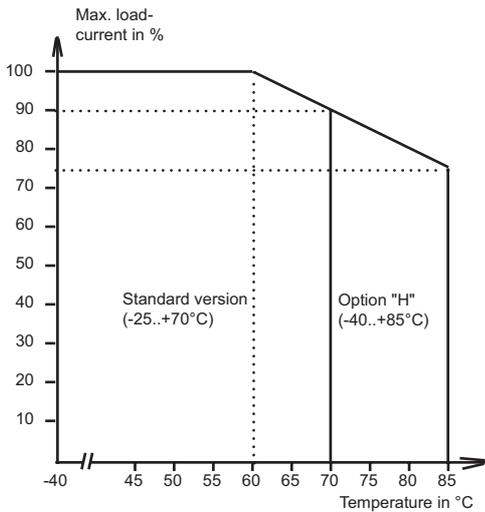

All electrical parameters (voltages, currents, frequencies, efficiency, ripple, spikes etc.) are 100%-tested at all internal points as well as on all customer interface points. The result is that the modules can guarantee a very high quality level, which has been displayed in several thousand applications within our customer's systems. The choice of components and the manufacturing technology lead to this regulator's especially high functional life time and reliable security.
