Efficiency

HC15.U30.24.063

HC15.U80.24.063

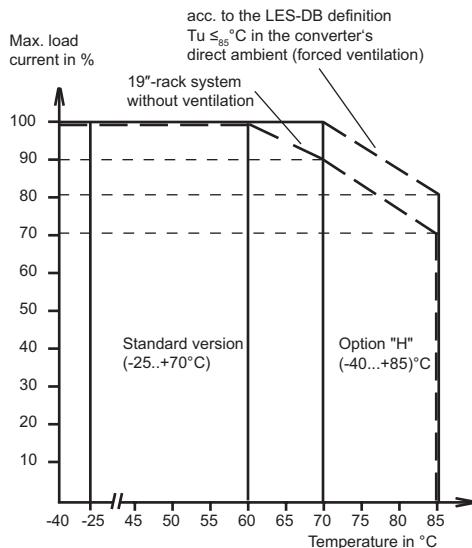

The **HC15.U** series with an output power up to 150 Watt is designed for mobile applications and high operational reliability.

Inrush currents are limited and long term transients are absorbed with the used SYKO-Patent of an active filter. The converter works with low input capacity and the chopping capacitors are chosen as high current capable capacitors.

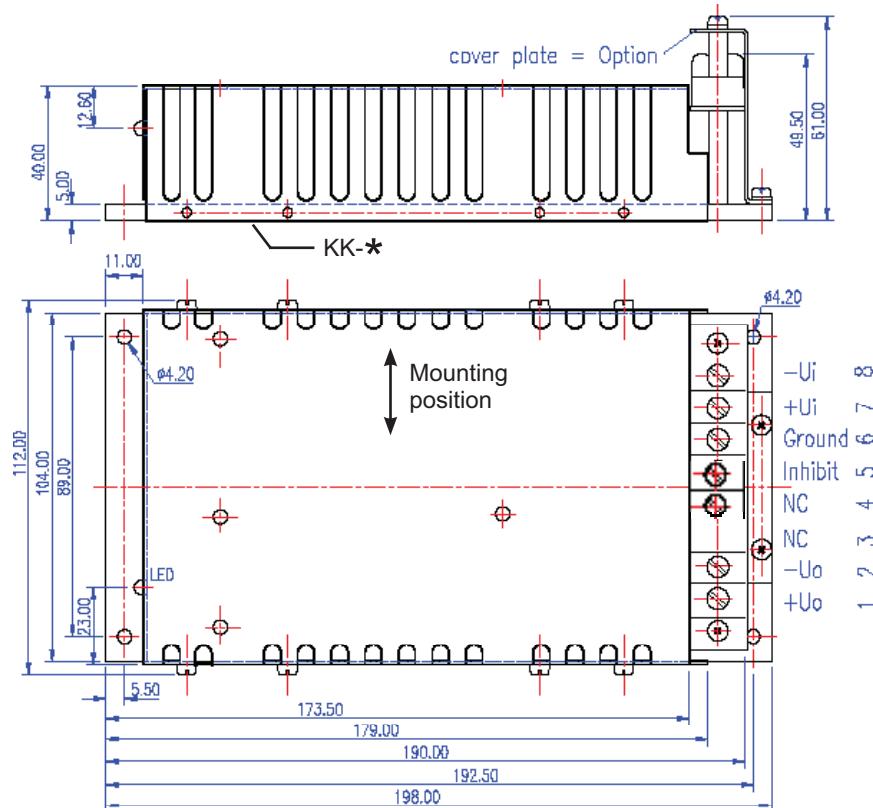

The clever mechanical build up allows the heat conduction to the heat sink. The direct chassis mounting allows very good heat transmission over the extended flange heat sink. The converter is equipped with an under voltage monitoring function with amplitude- and time hysteresis. The integral switch on current limitation is done with an internal power limitation.

The functionality is secured in the whole operational range up to limit values based on the chosen components, filters, security circuits, dynamical and statically current limitation and over voltage protection.
